COMPUTER AIDED DESIGN

MATERIALS

There are quite a few CAD software packages used in industry today. As designs become more complex, so does the software. The software we'll use in this course is CADKey. CADKey is a low-cost, simple, yet powerful drawing tool and all of the skills you develop using this software will apply to other CAD packages.

Once you start CADKey, you'll see this screen. Take some time to become familiar with the CADKey User Interface and the names of the items on the screen.
